AGRICULTURAL INNOVATION & SOLUTIONS

July 16, 2018

Variety: S21-C3

IP Soybean Update

Crop Conditions:

The beans are looking good so far despite the dryer weather we have had. The rows have filled in and flowering is under way throughout all nodes. A clean stand shows that both weed and insect pressure are under good control. Plant health is optimum with plenty of nodes and a good root mass.

Crop Staging:

Beans are in the R2 (full bloom) growth stage with flowering on the two uppermost nodes.

Weather:

Weather has been hot and dry with this area missing a couple of the more recent rains. Luckily this week has been cooler than the previous but a rain event would be welcomed.

Accumulative Weather Data Estimates from May 1st to July 12th

Location	Precipitation (mm)	GDD	CHU
Tuperville 2018	174.2	1013	1602
Tuperville 2017	377.2	910	1471
Tuperville 8 year Avg	255.7	948	1558
